

Concrete Solutions

54. BetonTage

09.-11. Februar 2010, Neu-Ulm

PRESS RELEASE

August 2009

54th BetonTage

Seizing opportunities – shaping the future

The BetonTage congress does not only offer a high-profile technical program – for several decades, it has also been a perfect venue for representatives of the European precast industry to share their experience, to establish contacts and to get new ideas and inspiration.

On the theme of “Seizing Opportunities”, industry peers will once again meet from 9 to 11 February 2010 at the Edwin-Scharff-Haus congress center in Neu-Ulm. The great variety of topics to be dealt with will cover all relevant segments of precast, including presentations on concrete products for road construction, gardening and landscaping, pipeline construction and structural precast, as well as lightweight concrete and small wastewater treatment plants. Panels focusing on economic and legal aspects will complement the technical part of the program. One of the key topics of the event will be the aspect of sustainability. In this regard, the 54th BetonTage will provide the framework to present to a broad target audience, for the first time, the results of the joint research project on “Building Sustainably with Concrete” conducted by the Deutscher Ausschuss für Stahlbeton (DAfStb, German Committee for Structural Concrete) and the Federal Ministry of Education and Research. Prof. Dr.-Ing. Hans-Peter Keitel, President of the Bundesverband der Deutschen Industrie e.V. (BDI; Federation of German Industries), Berlin, will be delivering the keynote speech.

In response to the growing international awareness of the congress, the organizers decided to introduce the guest country principle. France will be the guest country of the 2010 congress. For this reason, selected plenary sessions and panels will be interpreted simultaneously into French in addition to the interpreting service into English. An exhibition that is already fully booked will round off the range of offerings whilst providing an overview of latest developments in the engineering, software and supplier industries.

This international event is supported by the following partners:

Bureau International du Béton Manufacturé, Brussels
fédération internationale du béton, Lausanne
German Federal Association for Structural Concrete Elements, Bonn
German Association for Concrete and Construction Technology, Berlin
German Committee for Reinforced Concrete within DIN Deutsches Institut für Normung e.V., Berlin
Baden-Württemberg Association of Concrete and Precast Plants, Ostfildern

More information on the program will be available from October 2009 at www.betontage.de, or contact the organizer directly:
